Oklahoma Production Cost Report (Bi-Weekly)

6-13-25

Compared to last report: Volatility in Just-In-Time pricing define this report. Urea shows a slight uptick in price, current spot prices are down \$60-\$80 per ton compared to last week. In contrast DAP prices have surged significantly. As retailers exhaust their existing contracted supply, expect sharp price increases in the coming months. UAN prices have stabilized, but not because demand has dropped, it's because supply is essentially locked up. Most UAN was contacted earlier this spring, and current supply is extremely limited in Western Oklahoma and unavailable in Eastern Oklahoma at the retail level. With corn planting nearly complete across Oklahoma, side-dress season is here but many growers may find UAN hard to source if they didn't secure it ahead of time. Farm diesel and propane remain unchanged.

Oklahoma Retail Feed Cost Report (Monthly)

5-30-25

Compared to last report: Feed prices remain volatile but are projected to stabilize over the next month. Corn planting in Oklahoma reached 74% completion as of May 25th. Progress has been steady but remains behind average due to persistent wet conditions. May has brought mild temperatures and above-average rainfall, keeping fields saturated and limiting access for planting and fieldwork. Winter wheat is nearing or has reached maturity across the state. In Western Oklahoma, harvest preparations are underway, with some sale barns scheduled to close in the coming weeks. However wet field conditions and high humidity are delaying harvest activity and the completion of corn planting
