Oklahoma Production Cost Report (Bi-Weekly)
4-17-26

Compared to last report: Urea and Anhydrous both extended their upward movement, with Urea posting its first reported price at 900 per ton. That marks a significant milestone and reflects continued tight supply and persistent demand. In contrast, UAN 32 and 28 were slightly lower. Farm diesel continues to increase in price, with all contacts now reporting prices above the 4.00 per gallon mark. Over the past 60 days, farm diesel has increased by 1.62 per gallon significantly raising cost of production expenses. Together, rising fertilizer costs and sharply higher farm diesel prices are tightening margins and placing increased financial pressure across the agricultural industry.

Oklahoma Retail Feed Cost Report (Monthly)
4-3-26

Compared to last report: This month marks the start of summer feed pricing. Only about half of the contacts are reporting current feed prices, and next month's report is expected to reflect greater variability. This report has added sack cottonseed mill, corn, and alfalfa cubes. The USDA released its estimated corn acres planted for 2026 this week projecting a 3% decline in acres to be planted at 95.3 million acres. Despite speculation that high fertilizer costs could shift acres to soy beans, a limited Midwest sample suggests most farmers still intend to plant corn. Some drought relief was seen this week, though rainfall remains inconsistent. Additional storms are predicted for tonight in Eastern Oklahoma. CME cattle futures helped support the feeder market this week at sale barns, and if rainfall becomes more consistent across Western Oklahoma, the calf market is expected to move higher as well.
